PROFILE

I build AI agents end to end — the turn loop, the memory, the tools, and the interface. Luna is a complete agent product shipped solo; agent-kernel is the reusable runtime extracted from it.

CORE SKILLS

AI-assisted development

Directing coding agents through spec → review → test → ship. Everything above was built this way — each of Luna's 260+ versions carries a written rationale.

Agent — turn loops · tool dispatch & concurrency · layered memory · MCP · prompt engineering

Code — TypeScript · Python · C++ · JavaScript

Runtime — Bun · Node · Electron · SQLite · WebSocket

Tools — Git · Docker

LANGUAGES

Chinese (native) · English (fluent — working language)

Convention de stage available

Projects

Luna — desktop AI companion · solo

Python prototype → TypeScript rewrite · [GitHub] [Demo]

| Owned solo from product definition to release.

- **Memory:** three layers over one SQLite file, hybrid recall blending embeddings, keywords and recency, and a nightly dream cycle that distills the day into facts, diary and reusable skills.
- **Embodiment:** Live2D avatar with emotion-driven expression, phoneme lip-sync and a cloned voice.
- **Engineering:** Bun monorepo behind one Zod-typed WebSocket contract — a wire change not mirrored on both sides is a compile error. 260+ versions since June 2026, **each logged**.

agent-kernel — reusable agent core · solo

TypeScript · [GitHub]

- The persona-free kernel extracted from Luna: StateGraph turn loop, Zod-first tool registry with three-state concurrency, provider abstraction, full-turn tracing.

Open Source

moeru-ai/airi — ~50k ★ · 2 PRs merged

2026.06 – present

- Lifted Luna's web layer out and reshaped it for airi's stage-ui (**#2066**); fixed a background-process leak in their computer-use MCP (**#2006**).

moeru-ai/velin — 1 PR merged

2026.07

- Exposed a prompt component as an LLM tool (**#49**).

Experience

Campus Partner, Lead · ByteDance

2025

- Ran hackathons and campus vibe-coding workshops at Chang'an University. Named **Outstanding Campus Partner of the Year**.

Technical Intern · E-class, Chang'an University

2024.10 – 2025.02

- Selected **1 of 12**. Owned data collection, cleaning and ingestion for a campus RAG assistant — browser automation with pagination and resume-on-restart.
- Picked up how an agent is actually structured from the engineers around me. This is where everything above started.

Education

BSc Computer Science · EPITA, Paris

2026.09 – 2027.06 (expected)

Chang'an University × EPITA · Sino-French 3+1 joint programme

BEng Artificial Intelligence · Chang'an University

2023.09 – 2026.07
